Functional Requirements:

1. Project Management

- **FR 1.1:** The system must allow users to create and manage video production projects.
- **FR 1.2:** The system must capture and store the project's creative title, total production budget, and specific delivery deadline.

2. Studio Management

- **FR 2.1:** The system must maintain a registry of production studios, categorizing them by specialized type (e.g., green-screen room, sound-recording booth).
- **FR 2.2:** The system must record the physical location of each studio within the main headquarters (e.g., specific wing).
- **FR 2.3:** The system must track studio availability across different wings to facilitate scheduling.

3. Professional (Staff) Management

- **FR 3.1:** The system must allow the registration of creative professionals, capturing their profile details.
- **FR 3.2:** The system must categorize and map each professional to their primary technical skill (e.g., director, cinematographer, editor).

4. Session Scheduling & Assignment

- **FR 4.1:** The system must allow users to schedule multiple production sessions and link them to a specific project.
- **FR 4.2:** The system must assign a specific set date and a specific studio to each scheduled session.
- **FR 4.3:** The system must allow the assignment of a dedicated team of multiple creative professionals to a given session.

5. Equipment Tracking

- **FR 5.1:** The system must maintain an inventory of high-end equipment (cameras, lighting kits), tracked by their unique serial numbers and types.

- **FR 5.2:** The system must track the assignment of specific gear to individual production sessions.
- **FR 5.3:** The system must link assigned gear to the specific professional who is responsible for it during that session.
- **FR 5.4:** The system must record the physical condition of the gear upon its return to the central hub after the session.

6. Reporting & Analytics (Inquiry Requirements)

- **FR 6.1 (Skill Demand):** The system must calculate and report which technical skill has the highest number of session assignments to determine demand.
- **FR 6.2 (Project Inactivity):** The system must generate a report identifying projects that had no production sessions scheduled or recorded within a specific timeframe (e.g., the last month).
- **FR 6.3 (Gear Management):** The system must identify and report the professional who managed the highest variety of different equipment items within a specific timeframe.
- **FR 6.4 (Studio Utilization):** The system must generate a list of studios that hosted zero production sessions within a specific timeframe.
- **FR 6.5 (Project Equipment Use):** The system must compile a detailed list of all specific equipment items utilized for a specific project within a given timeframe.
- **FR 6.6 (Professional Profiles):** The system must retrieve a complete profile for any given professional, alongside an aggregated count of the total distinct projects they contributed to within a specific timeframe.
